

`dma_get_required_mask`

```
graph LR; A[dma_get_required_mask] --> B[dma_alloc_direct]; B --> C[dma_go_direct];
```

The diagram illustrates a three-step process for DMA operations. It begins with a box labeled `dma_get_required_mask`, which is shaded gray. A blue arrow points from this box to a second box labeled `dma_alloc_direct`. Another blue arrow points from the second box to a third box labeled `dma_go_direct`. The second and third boxes are white with black borders.
