

__mem_cgroup_try_charge_swap

mem_cgroup_css_offline

mem_cgroup_private
_id_put

```
graph LR; A[__mem_cgroup_try_charge_swap] --> C[mem_cgroup_private_id_put]; B[mem_cgroup_css_offline] --> C;
```

The diagram illustrates a control flow or dependency. Two source functions, `__mem_cgroup_try_charge_swap` and `mem_cgroup_css_offline`, are shown in white boxes on the left. Both have blue arrows pointing to a common target, `mem_cgroup_private_id_put`, which is shown in a gray box on the right.
