

pfn_section_first_valid

pfn_section_valid

subsection_map_index

```
graph LR; A[pfn_section_first_valid] --> C[subsection_map_index]; B[pfn_section_valid] --> C;
```

The diagram illustrates a data flow where two separate inputs, 'pfn_section_first_valid' and 'pfn_section_valid', are combined to produce a single output, 'subsection_map_index'. The inputs are represented by white rectangular boxes with black borders, while the output is a gray rectangular box with a black border. Two blue arrows point from each input box to the output box, indicating the direction of the data flow.
